+51 924130271 @ christiansanchezsaune@gmail.com
La Victoria, Lima, Peru
June 8, 1998 (28 years old)

AI Engineer specialized in **Agentic AI** and LLM-based systems, with **3+ years** designing and deploying production multi-agent architectures (tool calling, handoffs, orchestration, and RAG), built on a broader **6+ year** background in Machine Learning across predictive analytics, Computer Vision, and NLP.

I lead the architecture of end-to-end AI solutions from experimentation to production, combining mathematical rigor, MLOps, and cloud-native engineering with hands-on technical leadership to deliver measurable business impact.

SKILLS

AI & Generative AI Frameworks	Agentic AI, Multi-Agent Systems, LangGraph, RAG, LLMs, Deep Learning, CNNs, Time Series
Computer Vision	PyTorch, TensorFlow, Scikit-Learn, XGBoost
Model Deployment	OpenCV, Image Processing, Transfer Learning
MLOps	Model Serving, FastAPI, Docker, CI/CD (GitHub Actions)
Data Stack	MLflow, Kubeflow, Feature Store, Model Registry
Data Platforms	Python, Pandas, SQL
Cloud	Snowflake, Spark, PostgreSQL
Systems	AWS, Azure, Google Cloud
	Linux, Git

PROFESSIONAL EXPERIENCE

June 2025 Present	Senior Machine Learning Engineer - Consultant, SEIDOR ANALYTICS, Lima, PE Hybrid, Full-time Provided consulting services for beverage enterprises across LATAM, designing scalable data platforms and end-to-end ML systems. Client: Koandina - Beverage Industry - Built real-time data architectures using Kinesis, Glue, and Athena, exposing curated datasets through AppSync APIs for ML and analytics teams across multi-country operations. - Implemented Route 53 for DNS scaling and disaster recovery. - Optimized cloud infrastructure through refactoring of legacy data ingestion modules and deployment automation with IaC (CDK/SAM), reducing operational costs. Client: Bodegas La Negrita (BLN) - Spirits & Liquor Distribution - Led forecasting model development in Snowflake ML for multiple product lines. - Designed feature pipelines and automated inference workflows. - Built Streamlit and Power BI dashboards; integrated Azure data into Snowflake for analytics and feature engineering. Client: Arca Continental - Beverage Industry - Implemented an end-to-end MLOps framework in Snowflake for regression models. - Used Feature Store and Model Registry for lifecycle governance. - Dynamically scaled Snowflake compute clusters to parallelize regression-model training, significantly cutting training times on large-scale data loads. Client: Industrias San Miguel (ISM) - Beverage Industry - Developed a demand forecasting model in Snowflake ML to project sales for the next 18 months across Peru, Chile, Guatemala, the Dominican Republic, Haiti, and Brazil. - Engineered advanced features in Python and applied clustering to enhance forecast accuracy. Client: Innova Sports - Retail Industry - Developed demand forecasting solutions for retail products based on planned discount campaign scenarios. - Used Amazon SageMaker notebooks for exploratory data analysis, SageMaker training jobs for model development, and SageMaker Pipelines to automate model training and inference workflows. Snowflake ML AWS (Kinesis, Athena, SageMaker, CloudFormation) Azure Python MLOps
----------------------	---

November 2024 June 2025	Tech Lead, Sokso, Lima, PE <i>Hybrid, Full-time</i> › Led the architectural design of the SMART 3.0 platform, supervising and assigning tasks to backend and frontend development teams, and establishing technical standards for implementation. › Headed the strategic project of migrating the ERP system from SAP to NetSuite, coordinating the transfer of critical data, redesigning business processes, and ensuring operational continuity during the transition. › Managed the company's AWS infrastructure, implementing deployment automations on EC2 instances, configuring CI/CD pipelines, and optimizing costs and performance of cloud services. AWS (EC2, ECS, S3) CI/CD DevOps NetSuite SAP ERP Nest.js Next.js Technical Leadership
November 2023 November 2024	Full Stack Developer, Sokso, Lima, PE <i>Hybrid, Full-time</i> › Led the design and implementation of advanced improvements to the frontend (Vue.js) of the SMART 2.0 platform, optimizing the user experience in critical modules, such as the customer contact system, and applied improvements in cybersecurity practices, establishing secure development standards for both frontend and backend (.NET). › Contributed to the initial development of version 3.0 of the core SMART platform, using Nest.js in the backend, Next.js in the frontend, and configuring a robust DevOps pipeline in AWS (ECS, S3, CI/CD), achieving an agile, scalable, and highly available infrastructure. › Implemented multiple Python automations to streamline tasks in the commercial and design areas, including data processing scripts, custom report generation, and automated workflows that improved efficiency and reduced manual work time in both areas. › Developed machine learning pilot projects: a sales forecasting model for the coming months using time series techniques, and a classification model to predict customer churn (Python, PyTorch, GCP), which improved accuracy in inventory management and allowed anticipation of abandonment patterns, optimizing customer retention. Vue.js .NET SQL Server Machine Learning Python GCP AWS (EC2, ECS, S3) CI/CD Next.js DevOps
November 2023 March 2025	Full Stack Developer specialized in AI, ARKRISK, New York, US <i>Remote, Part-time</i> › Led the architecture and delivery of a production multi-agent system (OCR agent → Validation agent, sequential handoff, orchestrated with LangGraph) for automated insurance-policy processing, combining custom PyTorch models, a VectorDB for reference context, and custom Node.js tool APIs to validate extracted data against business rules. › Drove the system's evolution toward AWS Bedrock and Guardrails, and implemented observability (container-level logging/tracing plus CloudWatch metrics) and an evaluation loop from client-reported failure cases to monitor and improve agent reliability in production. › Built a second RAG-based conversational system with memory and function tools (FastAPI, LangGraph, Ollama), integrating local LLMs (DeepSeek, Llama3, Phi4) for data privacy, plus OpenAI Assistants v2 integrations for QA chatbots. › Delivered the surrounding product: a Next.js frontend consuming streamed LLM responses in real time, AWS integrations (EC2, DynamoDB, S3), and Python automations for internal workflows. Multi-Agent Systems LangGraph VectorDB AWS (EC2, DynamoDB, Bedrock, CloudWatch) Guardrails RAGs FastAPI Ollama DeepSeek OCR Next.js LLMs OpenAI
May 2023 October 2023	Machine Learning Engineer, IMPACTO AI, Lima, PE <i>Remote, Full-time</i> › Led development of LLM-powered WhatsApp bots (Chat-GPT) combining RAG and function tools to automate real business workflows such as appointment scheduling, reminders, and payment-status inquiries, an early hands-on introduction to RAG and LLM function calling. › Extended the chatbot line to Messenger and Instagram, and incorporated advanced OpenCV-based OCR document processing. Function Calling RAG Chat-GPT OpenCV
January 2022	Full Stack Developer, AMAUTEACH PROJECT, Lima, PE <i>Remote, Full-time</i>

- December 2022**
- Developed AmauTeach Exam, an online examination platform focusing on plagiarism prevention using advanced data processing and machine learning techniques. Used technologies such as Vue, Flask, FastAPI, and Node.
 - Performed AWS service integrations, leveraging Cognito for user authentication, S3 for multimedia content storage, and Lambda functions to optimize microservices related to data processing.

Vue Node.js Security AWS Big Data

- July 2021** **Full Stack Developer, CHAZKI, Lima, PE** *Remote, Full-time*
- December 2021**
- Contributed to the development of critical features in Chazki's logistics platform, working on web services and the mobile application, using technologies such as Vue, React Native, Node, and Google Cloud.
 - Contributed to the backend developed with Spring Boot for calculating minimum delivery routes for drivers, implementing optimization algorithms with Java, using Spring Data JPA and REST APIs, achieving improved delivery times and optimized operational costs.
 - Implemented and maintained messaging brokers such as Kafka to ensure efficient and real-time data transmission in a Big Data environment.

Logistics Vue React Native Node Java Spring Boot Spring Data JPA REST APIs Databases Big Data Kafka

- October 2020** **Full Stack Developer and Data Scientist, MDP CONSULTING, Lima, PE** *Remote, Full-time*
- July 2021**
- Managed data pipelines on IBM Cloud to improve debt collection management in banking institutions, ensuring data security in Big Data environments.
 - Applied clustering and other Machine Learning analysis techniques to collection call data to uncover behavioral patterns and statistics, using libraries such as pandas, scikit-learn, and Jupyter Notebooks.
 - Conducted thorough security testing, including SQL injection tests with tools such as SQLInjectMe, Sqliv, and Sqlmap, as a preventive measure against possible attacks.

Data Security Clustering Flask Automation Big Data

- July 2020** **Freelance Computer Vision Engineer, LUZ DEL SUR, Lima, PE** *Remote, Freelance*
- October 2020**
- Built a CNN-based Deep Learning model for automated digit and letter recognition on electric meter displays for this Peruvian electric utility company, as part of an OCR-based meter-reading automation workflow that reduced manual data-entry effort.

LANGUAGES

- English (B1)
- Japanese (intermediate)

STRENGTHS

- Self-taught
- Responsible
- Autonomous
- Leader

EDUCATION

- Bachelor's Degree in Computer Science - Universidad Nacional de Ingeniería (UNI), Peru (2018 - 2023)

ACHIEVEMENTS

- Beca 18 - PRONABEC (Scholarship for students with high academic performance)
- Top 5% (2018 - 2023) - Faculty of Sciences - UNI

CERTIFICATES

- Deep Learning Specialization - Coursera
- AI in Medicine - Coursera
- Advanced MLOps Bootcamp | Machine Learning Operation Hands-on - Udemy
- AWS Certified Machine Learning Specialty 2024 - Hands On! - Udemy
- Oracle AI Vector Search Professional

PRESENTATIONS

- Sep 2022 Introduction to Computer Vision using Deep Learning, UNI - IEEE CIS [🔗](#) [Post](#)
- Oct 2020 Introduction to Deep Learning, UNI - FC [🔗](#) [Post](#)
- Aug 2020 Introduction to AI, UNI - FC [🔗](#) [Post](#)

PROJECTS

UNI-MEDIC

2020 - 2021

[🔗 github.com/uniMedic](https://github.com/uniMedic)

A medical chatbot was developed using Deep Learning for real-time diagnostics. The mobile application was created with React Native, the backend with Express.js to manage records and medical histories, and Flask to consume Artificial Intelligence models. Deployed on the AWS cloud using Amplify, Cognito, and DynamoDB.

[React Native](#) [Express.js](#) [Flask](#) [AWS](#) [Pytorch](#)

RASPI-BLOODVIEW

2020 - 2021

[🔗 github.com/Enigma-AI/RasPi-BloodView](https://github.com/Enigma-AI/RasPi-BloodView)

Blood cell detection system deployed on Raspberry Pi 4 using PyTorch. The convolutional neural network model allows quick and cost-effective recognition of 3 types of blood cells. Features a custom HTML/CSS interface rendered with Flask and a file management system for secure storage on the server.
